

## VARIABLE TRANSFORMER

- Closed Variable Transformer
- Motorized Variable Transformer
- Single Phase Variable Transformer
- Two Phase Variable Transformer
- Three Phase Variable Transformer

## CLOSED VARIABLE TRANSFORMER

We offer a wide range of close type variable transformer to suit the application area. They are made using advanced technology and designed as per the industrial norms.

We even provide customization in the transformer to accurately suit the application location of the client.

## MOTORIZED VARIABLE TRANSFORMER

The motorized variable transformer provides a mean to control the speed with the help of gears. They are mainly used for completely simple operations and functioning.

The motorized variable transformer is made from best quality copper. They are made is such a way that there is no loss in watt or voltage during the process.

## SINGLE PHASE VARIABLE TRANSFORMER

The single phase variable transformer are used in large application area for their simple and effective operations. They are made using best quality metal and are designed under the

industry standards. The single phase variable transformer are categorized based on the i/p, o/p, and the number of phase. They are offered in different models ranging from 120-480 VAC.

## TWO PHASE VARIABLE TRANSFORMER

We are specialized in manufacturing the two phase variable transformer. They are presented to simplify and make the handling of two phase power effectively.

The two phase variable transformer are renowned in the market for their properties like shock resistance and thermal proof operating. They can be purchased from us in different specification as per the customers need.

## THREE PHASE VARIABLE TRANSFORMER

The three phase variable transformer is used to manage the power voltage that is in three different phase. It is simple and easy to operate the transformer. The three phase variable transformer we offer has great life span and durable performance. They are presented in number of specification and characteristics that suit the application area.
